

Program model examples

Example 1: Adaptive Capacity focus

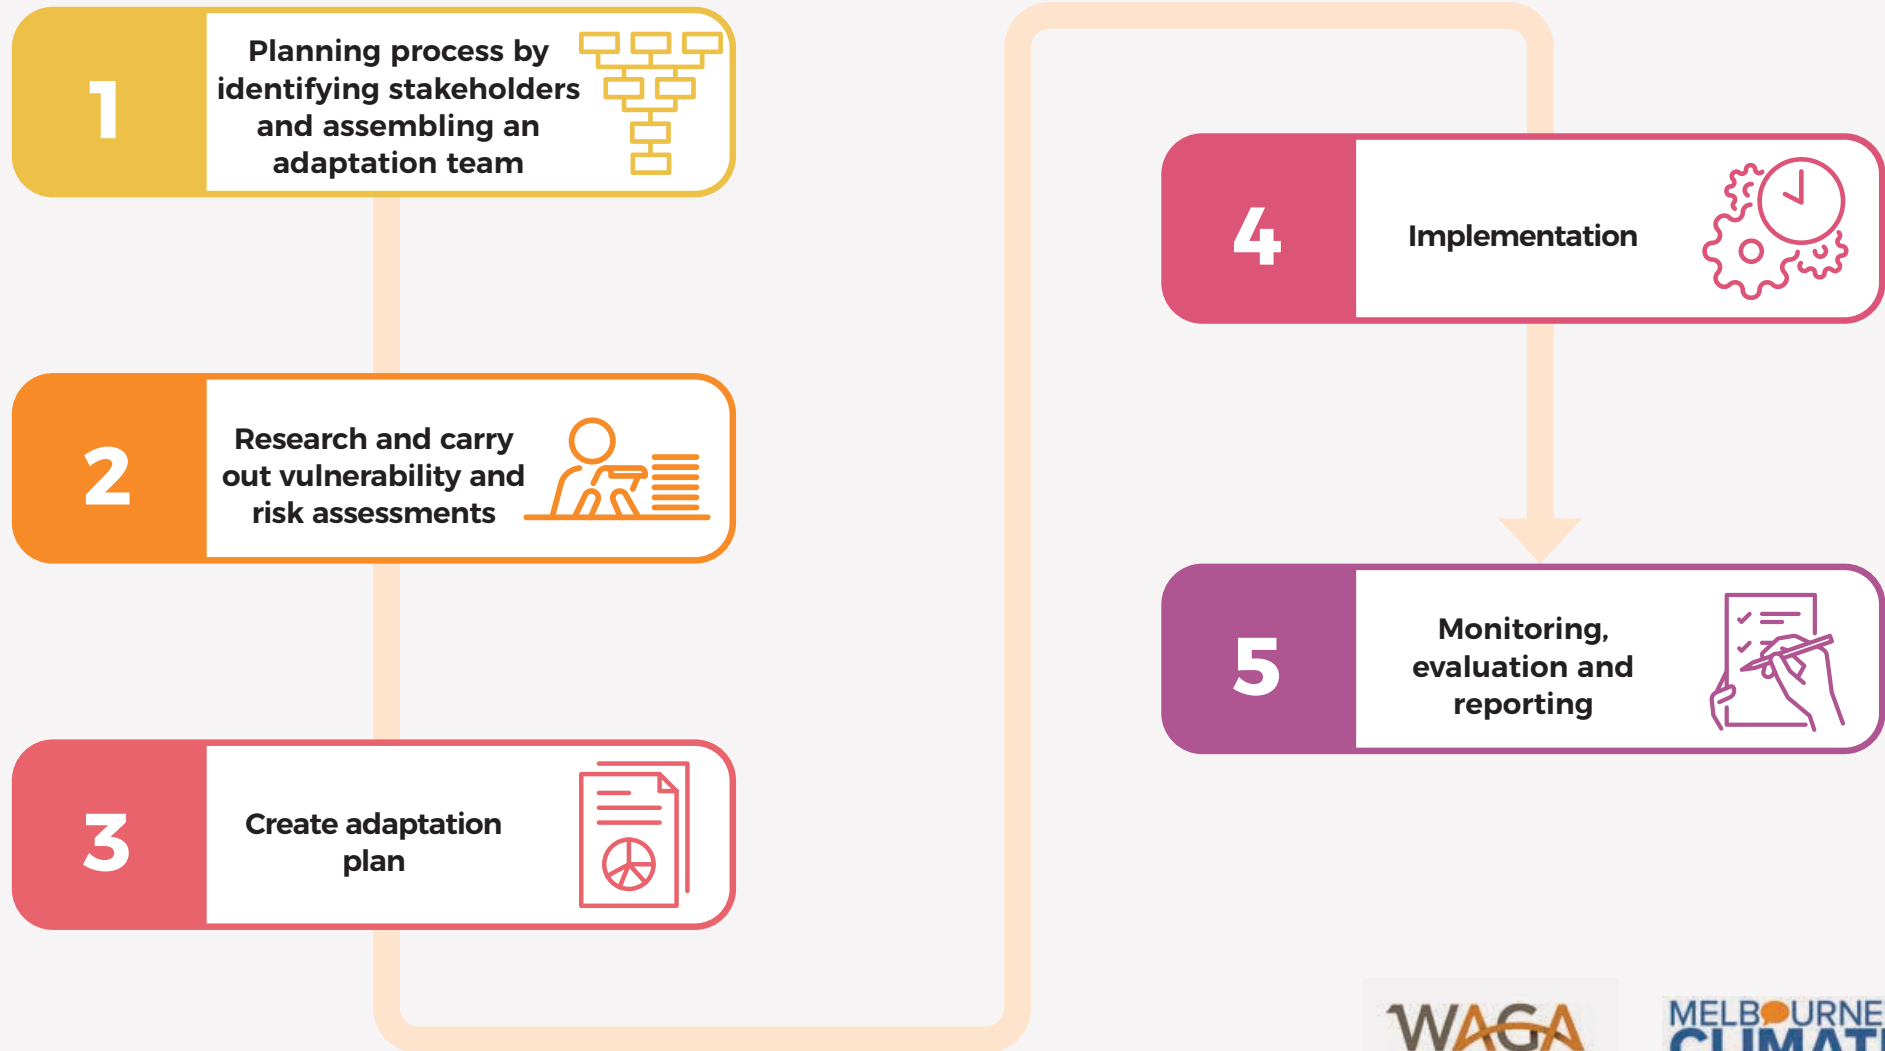

An adaptive capacity assessment will provide an overview of a council organisation's high-level governance, leadership, process and policy capabilities that enable them to respond to climate change risks.

Program model examples

Example 2: Adaptation response planning focus

A climate risk assessment to analyse expected climate change impacts across council operations and complete risk assessments. Prioritises climate risks to infrastructure and services.

Program model examples

Example 3: Technical hazard assessment focus on a priority climate risk

A detailed climate hazard or vulnerability assessment for a prioritised sector, service or asset. The assessment determines the extent and timing of the impact and determines thresholds for decision making.
